

Food Analysis Companies

Companies or individuals interested in laboratory nutritional analyses of foods, other chemical analyses, microbiological and shelf life studies have a wide selection of private analytical companies from which to choose. Several are given below; the customer can call and inquire about specific services and fees. Some of the companies listed also provide HACCP training, consultations, process approvals and product validations.

For nutritional analyses, the first three companies listed all do complete nutrient analyses and are familiar with labeling laws. Minimally, a composite laboratory analysis (from at least 12 batches) should be done by a USDA/FDA certified company, to be an accurate representation of the product. However, the advice of the company providing the service should be used.

Someone getting ready to sell a food product may also need shelf life studies, and these companies also are able to provide that kind of work. Also use Google to find others, such as the list of independent testing labs at Cole-Parmer www.foodtechsource.com/rcenter/labs.htm.
